

Smart Toilet Solution

EBSL's Smart Toilet Solution adopting various sensors such as Arwin SENS08 battery operated wireless indoor air quality sensor for monitoring toilet's air quality to improve and enhance the cleaning management of toilets.

Solution Highlights

Air Quality Monitoring

it monitors Ammonia NH3, Hydrogen Sulfide H2S, Temperature and Humidity through data analysis

Environment Monitoring

it measure water usage, power utilization and water leakage for operation and business planning in the long run

Replenishment of consumables

it monitors usage level of consumables including soap and toilet papers for effective management.

Key Benefits

Total Control of Environmental Conditions

the collected data of air quality, water usage, power utilization, water leakage on the floor can be shared, retrieved and analysed for business intelligence, insight and decisions.

Minimizes Risks

the solution maximizes protection with real-time detection, alert issues and actions taken.

High Automation

it results in higher air quality working environment, fewer human errors, happier employee and better staff retention.

Industries / Applications

- Facility Management Companies
- Property Management Companies
